ENGINEERING MANIFESTO

Computer Science & Engineering student focused on engineering high-throughput backend services, modern machine learning inference pipelines, and responsive client architectures from first principles. Most of what I learn becomes a project.

TECHNICAL STACK & CAPABILITIES

Languages:

Engineering:

Core Areas:

FEATURED SYSTEMS & PROJECTS

A1 Swaara - Modern Sovereign Android Music Player

- High-fidelity Android audio streaming client engineered for zero telemetry and low-latency buffer control.
- Supports unthrottled audio stream resolution up to 320 kbps with custom equalizer DSP shaping.
- Offline caching engine with resilient local database state storage. Production APK shipped.

FLUXA - Native Android Video Application

- Native Android video application engineered with Jetpack Compose for zero-jank declarative rendering.
- Custom ExoPlayer/Media3 playback controller handling adaptive HLS video streaming pipelines.
- Structured concurrency with Kotlin Coroutines and asynchronous StateFlow data feeds.

VelorioLabs - Open-Source Systems & Developer Collective

- Open-source developer collective researching and developing foundational developer utilities and security tools.
- Projects include AetherEye (ADS-B telemetry), TeleVortex (media pipelines), and Termux-Vault.

EDUCATION & CONTINUOUS EXPLORATION

Bachelor of Engineering - Computer Science & Engineering (CSE)

- Core Coursework: Data Structures & Algorithms, Operating Systems, Database Management Systems, System Design.
- Active Exploration: AI/ML, GenAI, Full-Stack Architecture, Distributed Systems, Open Source Engineering.
